
Directory Management

Description:

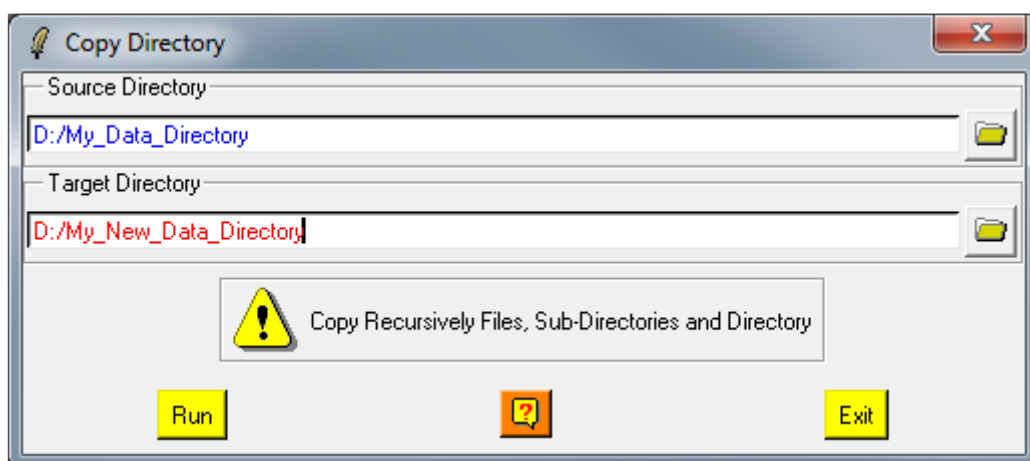

This menu proposes different Directory basic management functionalities.

Create Directory:

This program creates a user-defined directory.

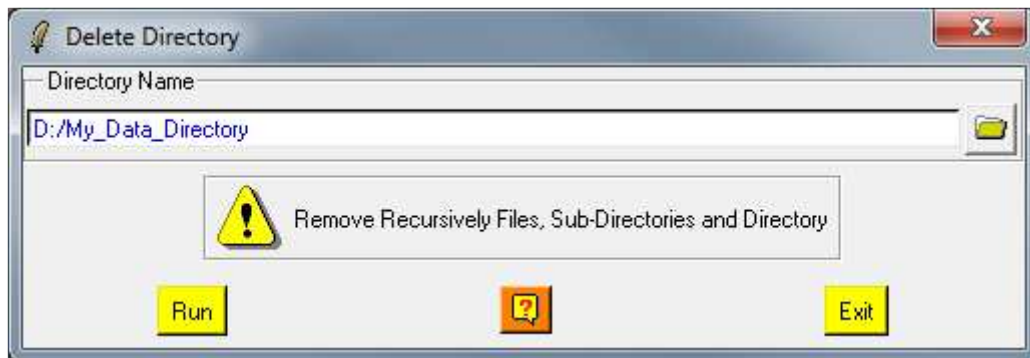

Copy Directory:

This program copies a user-defined source directory to a user-defined destination or target directory.

Note : Sub-directories are also copied in a recursive way.

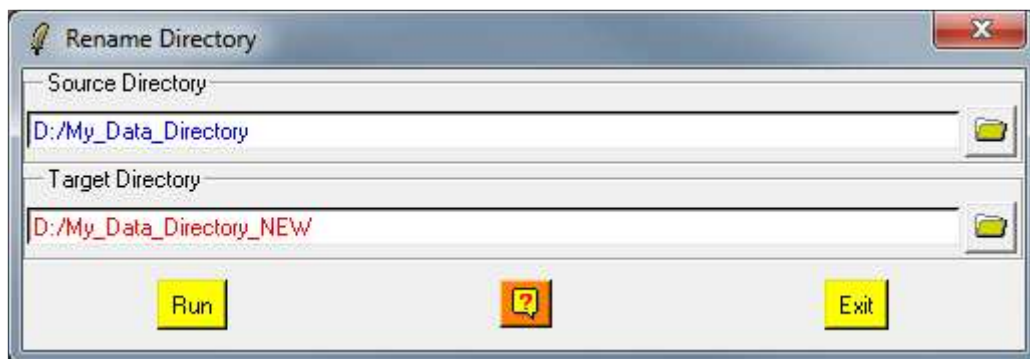

Delete Directory:

This program deletes a user-defined directory.

Note : Sub-directories are also deleted in a recursive way.

Rename Directory:

This program renames a user-defined source directory to a user-defined destination or target directory.
